

Intelligent Music for Games

Dr. Kjartan Olafsson

Professor, Founder and CEO of Erkitonlist

Baldur J Baldursson

Audio Director - CCP Games

Contents

1. 1. Introduction and overview – Music in Eve Online
2. 2. Intelligent Music - CALMUS
3. 3. Connecting game elements with music parameters

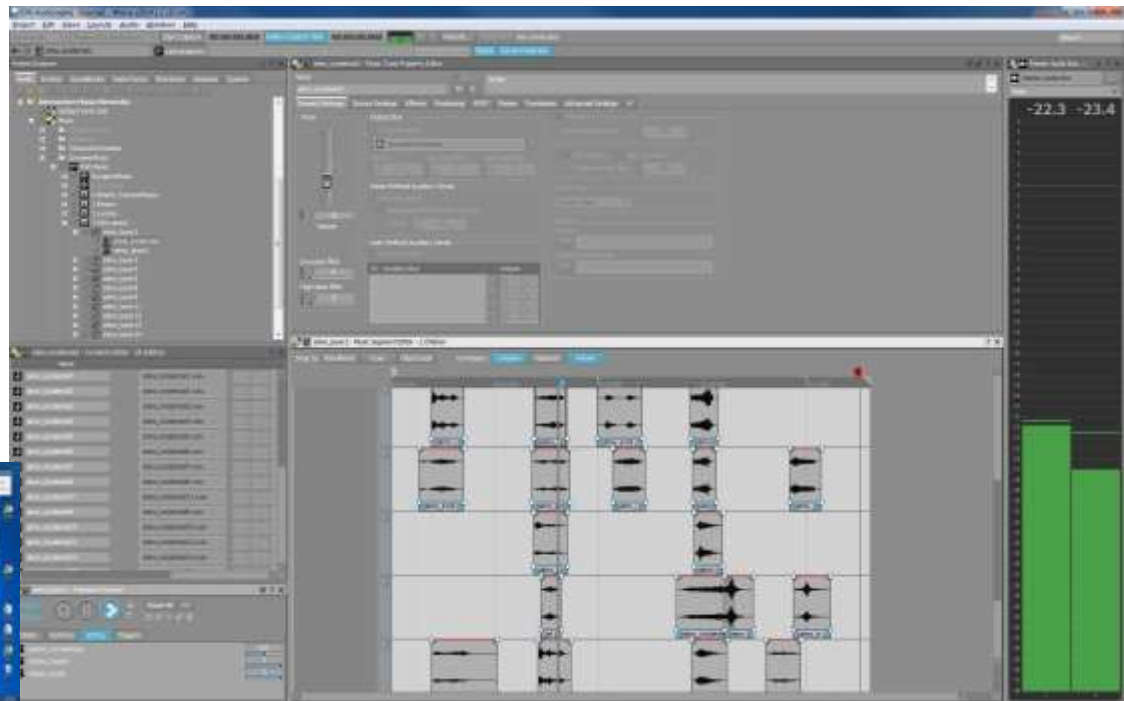

Music in Eve-Online

- 2003-2009: The Jukebox

Music in Eve-Online

- 2009: Wwise

Music in Eve-Online

- [Empire space](#)
- [Low sec](#)
- [Zero sec](#)
- [Wormhole space](#)

The benefits of having an intelligent music system

- we can better support an untold story
- because of repetition

First steps

- 2009: we started looking for possible solutions

Intelligent Music

- Calmus

Calmus – a brief history

- Sibelius Academy 1988
- Problems with probability and random processes
- Lisp

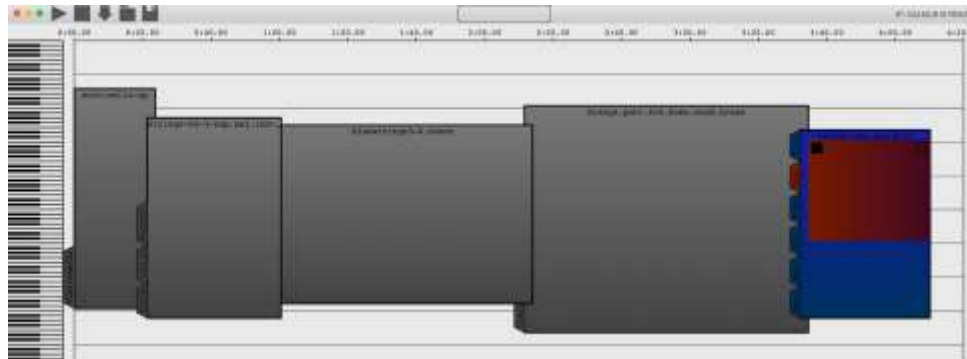

Calmus – the musical theory

- Real-time
- Musical ideas modified with AI functions
- Over 500 years of compositional methods

The hierarchy

- Musical Objects

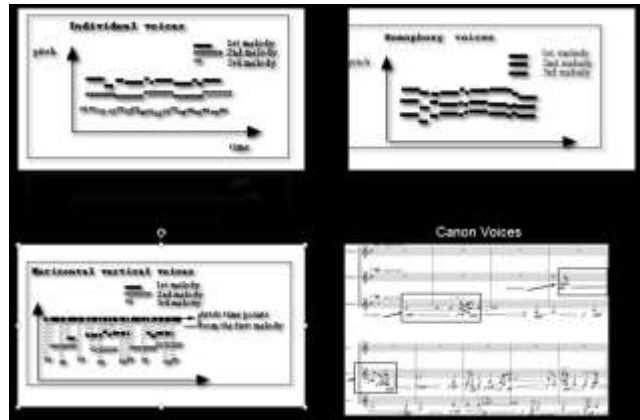

Musical Object

A musical object is based on:

Cells
Melodies
Harmony

Polyphonic structure

Algorithms

- *Various scales*
- *Interval - melody*
- *Interval - harmony*

Intervals - harmony

Interval - melody

Various scales

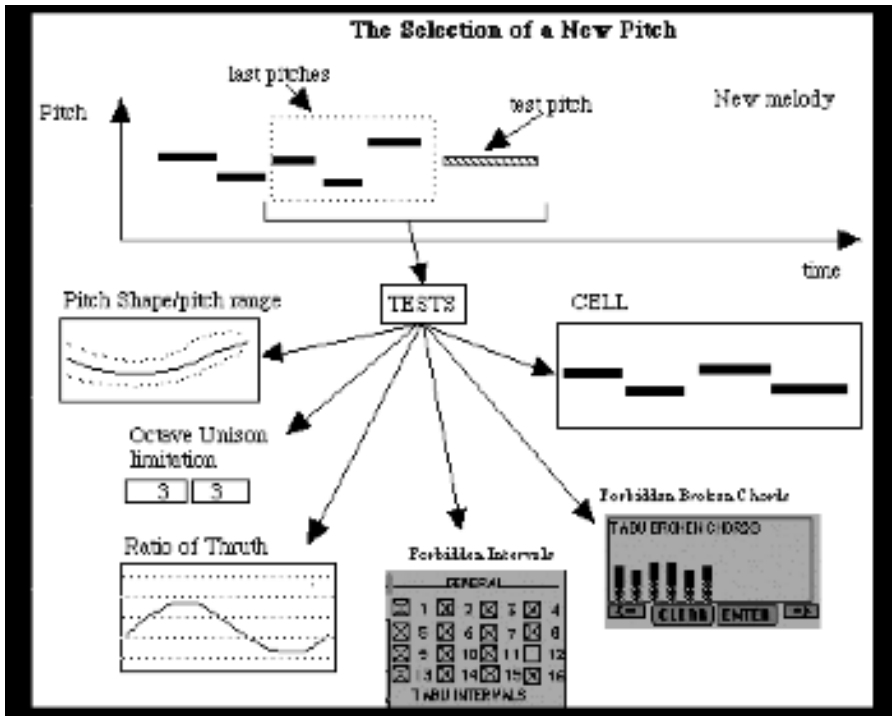

AI

The system is based on artificial intelligence which enables the user to work independently from any given presumption - in real time.

A simple example of Artificial Intelligence in melody construction

Selection of a New Pitch for a Melody Line

Musical parameters and syntax in Calmus

- Theme
- Harmony
- Scales
- Melody
- Texture
- Polyphony
- Tempo
- Pitch register

Gesture Control - Dance

Examples

- Viola Concerto 2000

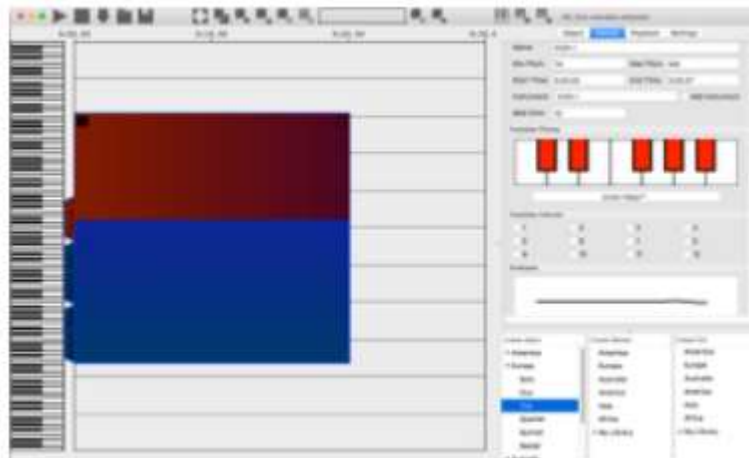

Received the Icelandic music awards in 2001 as the composition of the year

- [Play example](#)

Calmus Composer

- creates libraries for Calmus Gaming

Identify elements in the game for music creation

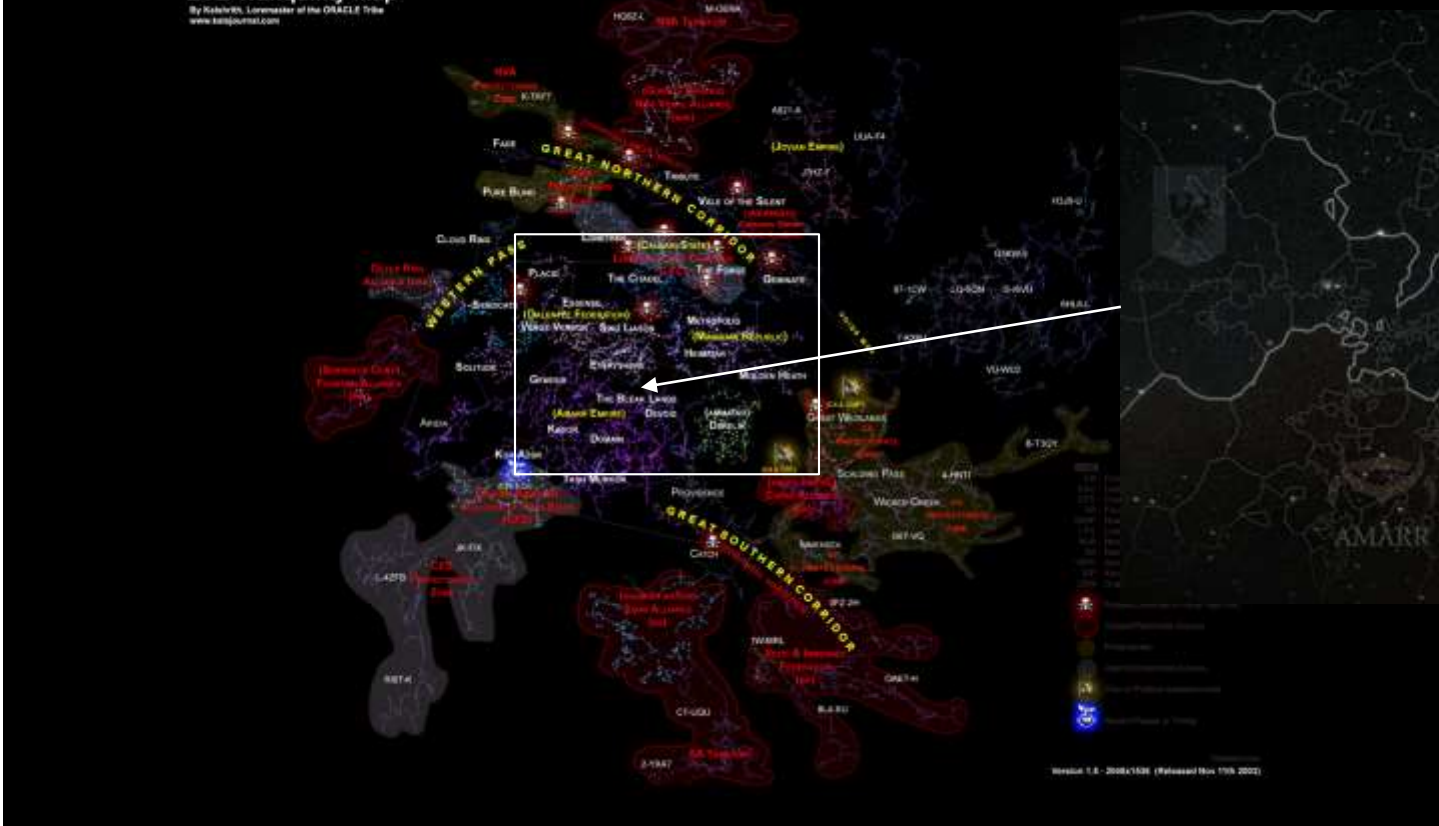

Eve Online:

- Characters
- Environment
- Conflict
- Development

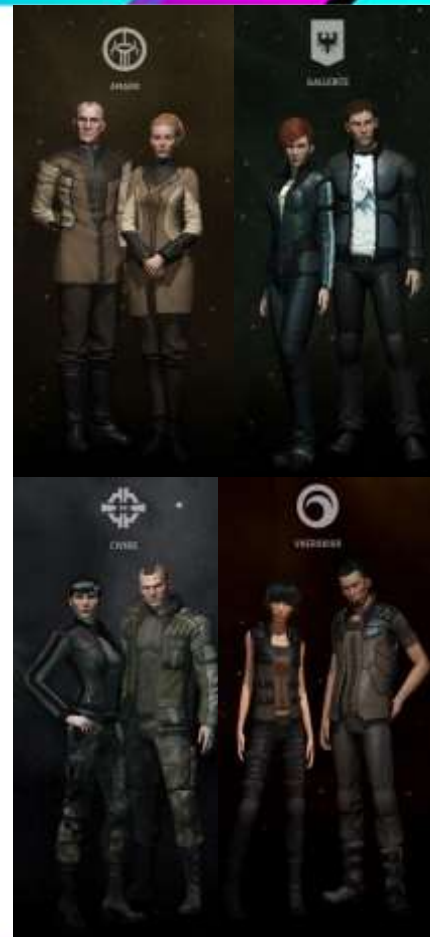

EVE Tranquility Map

By Nikolayk, Loremaster of the ORACLE Tribe
www.sasjournal.com

Types of characters - four basic / player races:

- **Amarr / Amarr Empire:** noble, regal and elegant (a bit evil)
- **Gallente / Gallente Federation:** smooth and curvy, flamboyant
- **Caldari / Caldari State:** hard and edgy - cold, functional
- **Minmatar / Minmatar Republic:** rusty and a bit dirty (slaves)

Types of characters - other NPC races:

- **Jove:** mysterious and enigmatic - also technically superior
- Numerous **Pirate Factions** with various background and behavior

Character Definitions / Character Cells

Amarr – regal and noble (evil)

- **Character cell(territory):**
- Principal melody intervals: Thirds, Sixths
- Scale: Dorian
- Pitch register: around C2
- Tempo: Adagio
- Polyphonic structure: Horizontal/Vertical
- Instrument texture: Classical

Gallente – smooth, curvy – flamboyant

- **Character cell(territory):**
- Principal melody intervals: Thirds, Fifths
- Scale: Aeolian
- Pitch register: around C1
- Tempo: Moderato
- Polyphonic structure: Homophonic
- Instrument texture: Classical

Caldari – cold, hard, functional

- **Character cell(territory):**
- Principal melody intervals: Minor 2nd / Aug 4th
- Scale: Kumoi
- Pitch register: around C'
- Tempo: Moderato
- Polyphonic structure: Homophonic
- Instrument texture : Electronic

Minmatar – rusty, dirty, painful

- **Character cell(territory):**
- Principal melody intervals: Aug 4 / Min7
- Scale: Prometheus
- Pitch register: around C2
- Tempo: Adagio
- Polyphonic structure: Canon
- Instrument texture: Electronic

Jove – mysterious, unknown, tech superior

- **Character cell (terrotory):**
- Principal melody intervals: m2 / m6
- Scale: Double Harmonic
- Pitch register: around C3
- Tempo: Largo
- Polyphonic structure:
- Instrument texture : Electronic

Pirates

- **Character cell (terrotory):**
- Principal melody intervals: m6 / m/M7
- Scale: Leading Whole Tone
- Pitch register: around C1
- Tempo: Allegretto
- Polyphonic structure: Individual
- Instrument texture: Electronic/Percussive

Character Definitions / Character Cells

Amarr – regal and noble (a bit evil)

Character cell(territory):

Principal melody intervals: Thirds, Sixths

Scale: Dorian

Pitch register: around C2

Tempo: Adagio

Polyphonic structure: Horizontal/Vertical

Instrument texture: Mixed

Musical parameters affecting the character cell (territories) in real-time according to the development of the game:

- Interval changes in harmony – various tensions in-game
- Type of polyphony – complexity and conflicts
- Change in pitch – darkness vs light
- Change in tempo – in-game tension, emerging threats
- Timbral character – cosmic anomalies such as wormholes etc.

Eve-Online - example

Normal

Amarr

Character cell (terrotory):

Melody intervals: Thirds, Sixths

Forbidden intervals: m2,M7

Scale: Dorian

Pitch register: around C2

Tempo: Adagio

Instrumentation: Mixed

Danger

Amarr

Character cell (terrotory):

Melody intervals: Thirds, Sixths

Forbidden intervals: **none**

Scale: Dorian

Pitch register: around **C1**

Tempo: Adagio

Instrumentation: Mixed - **changed**

Normal - new system

Gallente

Character cell (terrotory):

Melody intervals: Thirds, Fifths

Forbidden intervals: 2/7

Scale: Minor

Pitch register: around **C2**Tempo: **Moderato**

Instrumentation: Classical

Play Demo

Technical implementation

- Calmus is written in Lisp
- Runs in ECL which is open source interpreter for CL (Common Lisp)
- AudioKinetic opened its API to allow us to send MIDI events into the sound engine. (Now open to everybody since 2015 version)
- Calmus feeds the MIDI events into Wwise which host the instruments

Summary:

- For an sandbox MMO where the story still hasn't happened we'd greatly prefer non pre-composed music
- Some kind of a system is needed – one such system is the AI based Calmus
- No system can work without first thoroughly defining game elements
- Currently, the system runs outside Wwise but ideally it should be a plug-in

Thank you
